ABOUT US

Established in 2008, PT Palmyra International is a company founded in Indonesia. To date, we continue to prove ourselves as a company that strives to provide innovative technology solutions and services to customers through Palmyra IT System Integrator, environmentally friendly renewable energy through Palmyra Energy, and help meet food needs through Palmyra Farm. Our team is passionate about opportunities to innovate and find extraordinary ways to solve our clients' needs that save money, increase efficiency, but still put quality first.

OUR COMMITMENT

Create jobs by empowering the people around our site.

Participate in national and international food needs.

VISION

To be the best farm, energy, and technology solutions company in Indonesia.

MISSION

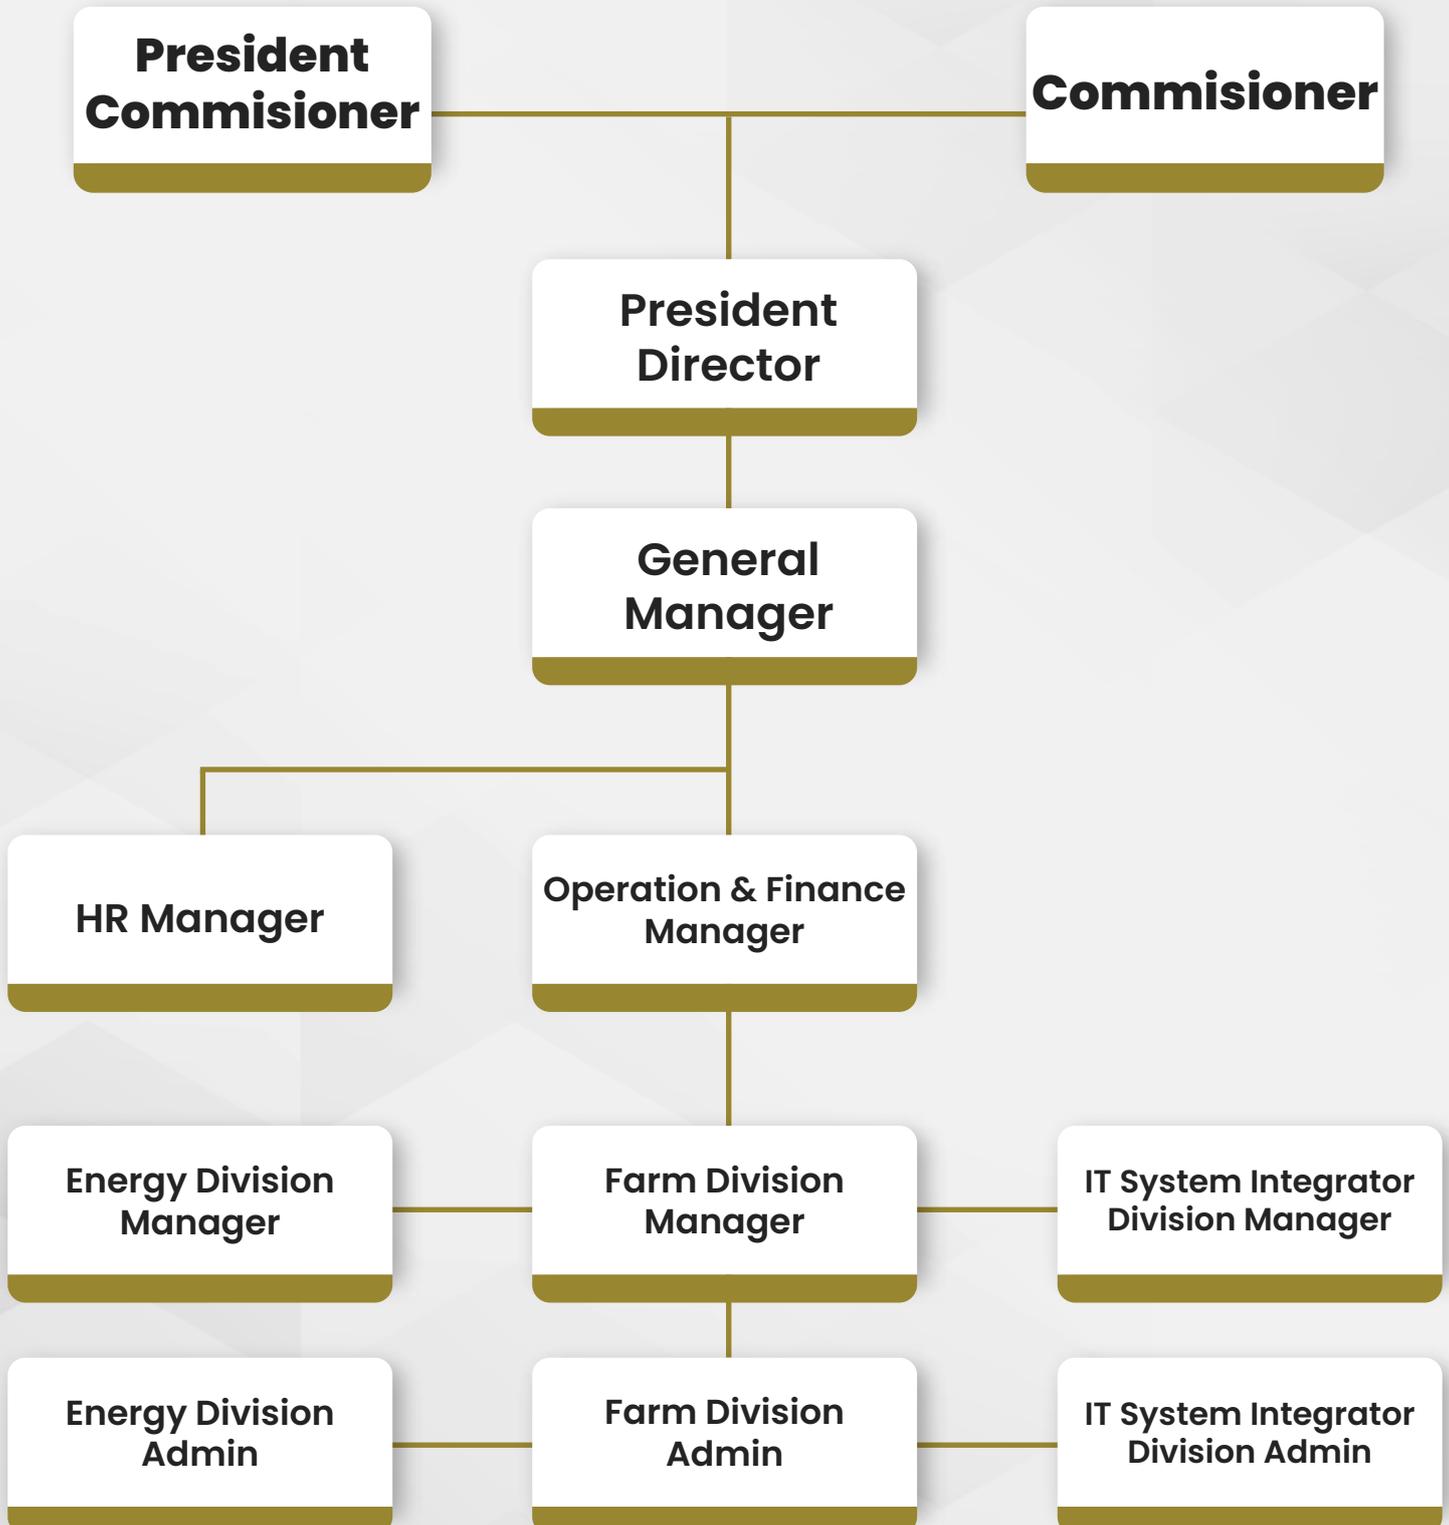

To deliver the best products to our clients.

To build long-term relationships with all our clients.

COMPANY

ORGANIZATION STRUCTURE

**Participate
in national and
international
food needs.**

PALMYRA FARM

Core Values

Relationships

Agriculture is a people business. The company strives to connect small farmers in the industry to share knowledge, resources, and grow together. Therefore, we encourage partnership, volunteerism, and mentorship among the stakeholders along the value chain of our products.

Services

The company focuses on serving individuals in the general community. This effort is carried out through the creation of a reliable market with high-quality farm products that bring satisfaction to both consumers and small-scale farmers.

Training & Development

Agriculture is constantly evolving, and we want to meet the challenges of a changing world by promoting continual education and training to build on our talents and develop new skills in the best use of available resources among the members of the company's value chain.

PT Palmyra International is a registered company to carry out agriculture related business like Crop farming, Livestock Farming, Trading of agriculture products and other agriculture related business. The company is located and operates in Indonesia with production units located at Palopo - Sulawesi, Gadog - Bogor District, Baturaja and Martapura - Sumatera, and Ciemas - Sukabumi District.

The best way to help people understand the role in agriculture and the life sciences is to share information. We equip our members to be advocates of our industry and ensure receive sustainable income from the best farming practice, which encourages more food production.

The ability to feed the future vested on the proper conservation of the land and environment we are living in today. Biodiversity conservation measures are part of our agriculture practices.

Vision

Lead the way towards eradicating famine in Indonesia and throughout the world by improving the productivity of farmland and the nutritional value of goods produced, while preserving and enhancing the environment.

Mission

Attain year-round sustainable production and supply ability by empowering small-scale farmers to make the best use of land, and by providing both consumers and small-scale farmers with a reliable market for high-quality farm products.

PALMYRA

RANCH & POULTRY FARM

Still related to supporting food needs, we also contribute to fulfilling nutritional needs through the production of animal protein. Some of the animals we raise include cows, goats, and chickens.

The quality of our livestock is carefully maintained, starting from proper feeding, vitamins, and other essential needs, with the goal of delivering the best results for everyone.

Supported by professional staff who are experts in their fields, we are hopeful and confident that we can consistently meet the community's animal protein needs while also creating job opportunities for the people living around our farms.

RANCH & POULTRY

PROFIT

Some of the advantages of this business are that animal feed is easily obtained from the surrounding environment, and waste from plantations—such as corn—can be utilized. Almost all parts of each animal can be used, including meat, milk, eggs, and even skin.

In addition, the waste from our livestock can also be used to support the growth of plantation crops, allowing both sectors to support each other.

VANNAMEI SHRIMP

Easy maintenance
profit promises
Economic

Whiteleg shrimp (*Litopenaeus vannamei*, synonym *Penaeus vannamei*), also known as Pacific white shrimp or king prawn, is a species of prawn native to the eastern Pacific Ocean, commonly caught or farmed for food.

During the 20th century, *L. vannamei* was an important species for Mexican inshore fishermen, as well as for offshore trawlers. In the late 20th century, the wild fishery was overtaken by the development of aquaculture production. This began in 1973 in Florida, using broodstock captured in Panama, which were used in hatcheries for larval production.

Around the beginning of the millennium, Asia introduced this species into their aquaculture operations (shifting from *Penaeus monodon*). China, Vietnam, India, and others have also become major processors and exporters.

WHY VANNAMEI SHRIMP?

The growth rate of this shrimp is relatively fast compared to other shrimp species.

It is feed-efficient and does not require a high amount of feed for cultivation. The maintenance period is relatively short.

Its hardiness is quite good, enabling it to adapt to a wide range of environmental conditions.

AMO

PLANT GROWTH ENHANCER

AMO (Ako'y Magsasakang Organiko) Plant Growth Enhancer is an organic crop nutrient product from the Philippines, made from natural ingredients such as kelp and neem. It is safe, environmentally friendly, leaves no chemical residues on crops, and is certified by the Fertilizer and Pesticide Authority (FPA) of the Philippines. AMO functions as a foliar fertilizer, soil conditioner, and natural pest deterrent. Field results have shown up to a 140% increase in yield and a 50% reduction in production costs, demonstrating its effectiveness and efficiency in modern agricultural and plantation practices.

Key Benefits of AMO PLANT GROWTH ENHANCER

- Improves Brix levels in plants, enhancing fruit sweetness, quality, and shelf life.
- Promotes faster growth, earlier flowering, and better fruit development.
- Produces healthier and heavier harvests with improved crop uniformity.
- Reduces pest attacks (e.g., insects, rats, and snails) by acting as a natural antifeedant.
- Enhances root development and overall plant vigor.
- Works as a multi-functional input: foliar fertilizer, soil conditioner, bio-fungicide, bio-bactericide, and natural pest repellent.
- Safe for organic farming and compliant with eco-friendly agricultural practices.
- Cost-efficient by minimizing the need for synthetic fertilizers, pesticides, and fungicides.

Corn

The use of AMO on corn is effective in accelerating vegetative growth, making leaves greener, and enhancing nutrient absorption. Plants become sturdier, cobs are well-filled, and harvest yields are higher and of better quality.

Rice

In rice, AMO helps increase the number of productive tillers, strengthens stems, and improves resistance to pests and diseases. Rice produces fuller, more uniform grains, leading to higher field productivity.

Cassava

Application of AMO on cassava supports root development and tuber enlargement. The tubers become bigger, more uniform, with higher starch content, resulting in improved harvest quality.
